Final - Part 1: Network Data Analysis

What is the MAC address of the computer at 10.10.10.201?

The MAC address is **00:16:17:0b:b4:93**.

This was identified by examining the Ethernet II header in packets where 10.10.10.201 appeared as the source IP address.

What is the host name of the computer at 10.10.10.201?

The host name of the computer is **BLANCO-DESKTOP**.

This was identified in packet 530, where the system appears to be registering with the domain **DOGOFTHEYEAR**.

What is the Microsoft Windows version (XP, 7, 8, or 10) of the computer at 10.10.10.201?

The operating system is **Windows 10**.

This was determined from packet 1826, where the system attempts to connect to 190.242.10.52. The HTTP User-Agent field contains information indicating the Windows version.

What time did the torrent activity from 10.10.10.201 start?

Torrent activity began at **Sun, 15 Jul 2018 04:17:27 GMT**.

This timestamp was identified in packet 4277 within the HTTP header information.

What torrent file did the user on 10.10.10.201 download?

The file downloaded was **Betty_Boop_Rhythm_on_the_Reservation.avi**.

This was identified by navigating to File → Export Objects → HTTP in Wireshark.

The reconstructed objects included both an image and the torrent file associated with Betty Boop, which is also referenced in packet 4277.

What is the name of the torrent client used on 10.10.10.201?

The torrent client used is **Deluge 1.3.15**.

This was identified in packet 4312, where the HTTP User-Agent field lists the torrent client version.

What file is being seeded (shared) by the torrent client on 10.10.10.201?

The file being seeded is **Betty_Boop_Rhythm_on_the_Reservation.avi**.

This conclusion is based on repeated observations of torrent activity involving this file. No evidence was found indicating additional files being shared.

Additionally, torrent clients typically seed files that have been downloaded, supporting this conclusion.
